Home

Where every user starts: ask a question across Freebird's systems or pick up work waiting on them.

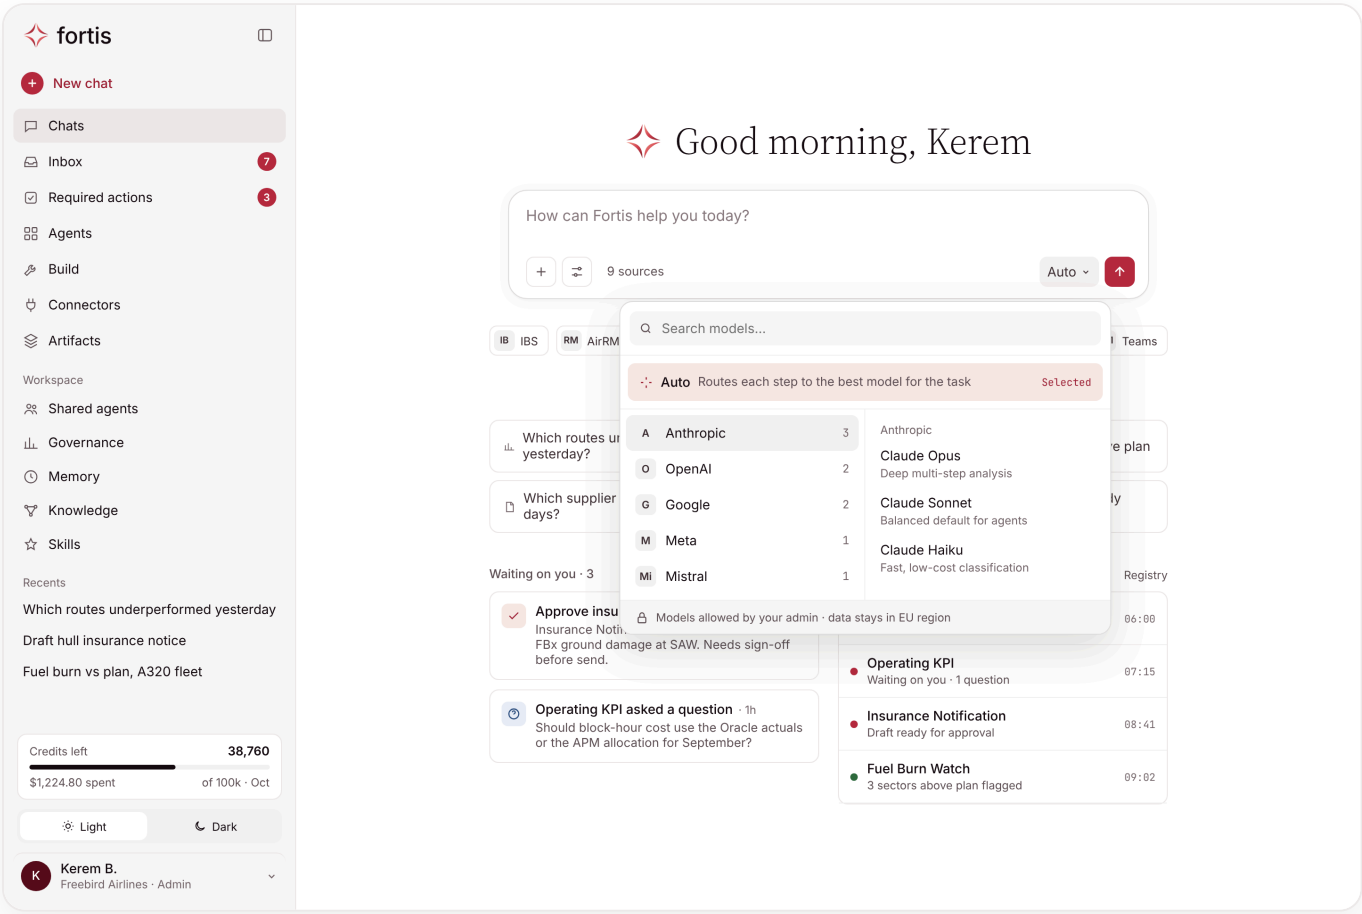

FEATURES

- Question box with attach, voice, source scope and model choice
- Chips for each connected system (IBS, AirRM, Octopus, Oracle, APM, SkyBreathe…)
- Suggested starter questions
- “Waiting on you”: approvals and agent questions
- Today's agent activity with status and time

Home — model picker

Auto routes each step to the best model; admins limit which providers are allowed.

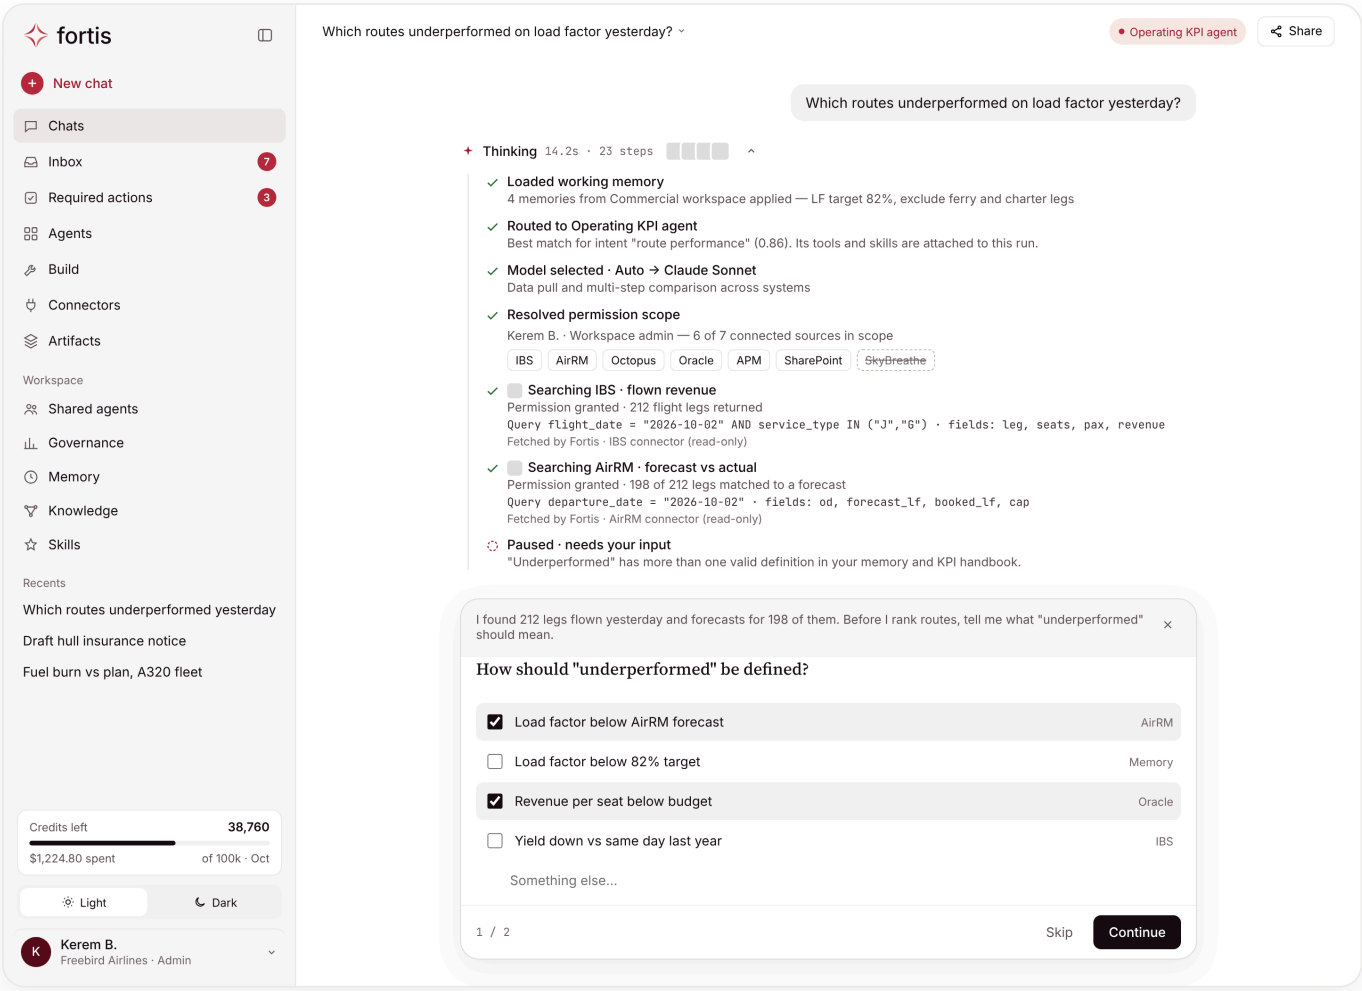

FEATURES

- Auto mode (default) picks a model per step
- Browse by provider, then model with a one-line strength
- Searchable list
- Admin policy footer: allowed models, EU data residency

Conversation — live trace

Every answer shows its working, so users can trust it and auditors can check it.

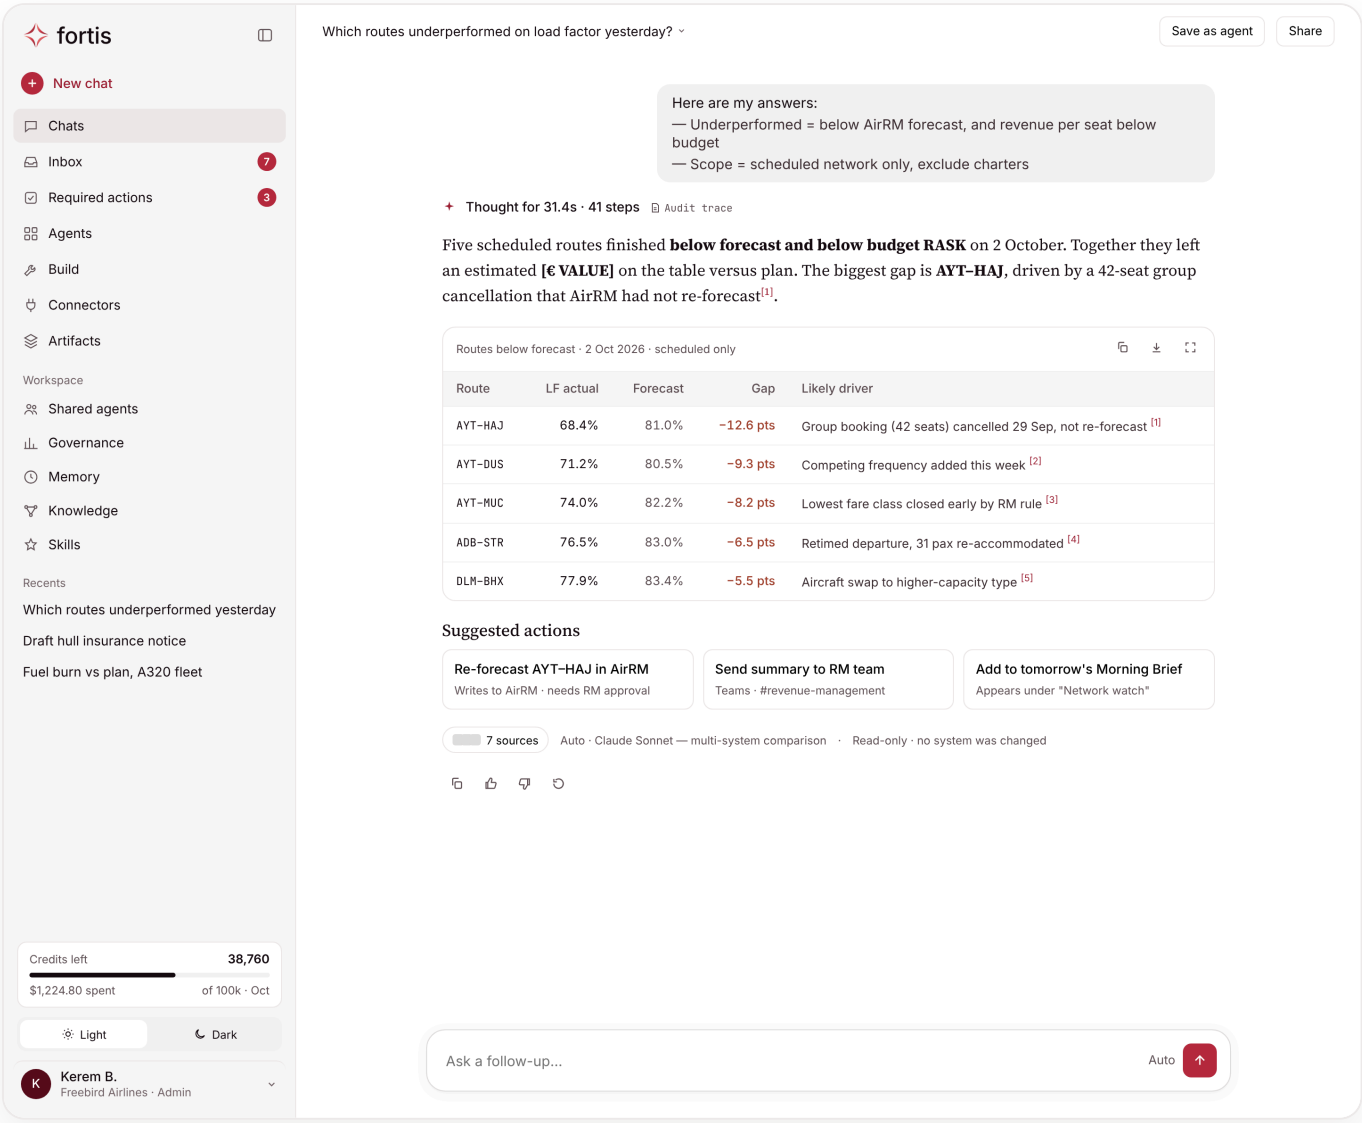

FEATURES

- Live step trace: memory loaded, agent routing, model chosen
- Permission scope resolved per user; out-of-scope sources struck through
- Each system query shown with result count and connector
- Agent pauses and asks a clarifying question card with multiple choice

Conversation — cited answer

The answer: short summary, evidence table, citations and one-click next actions.

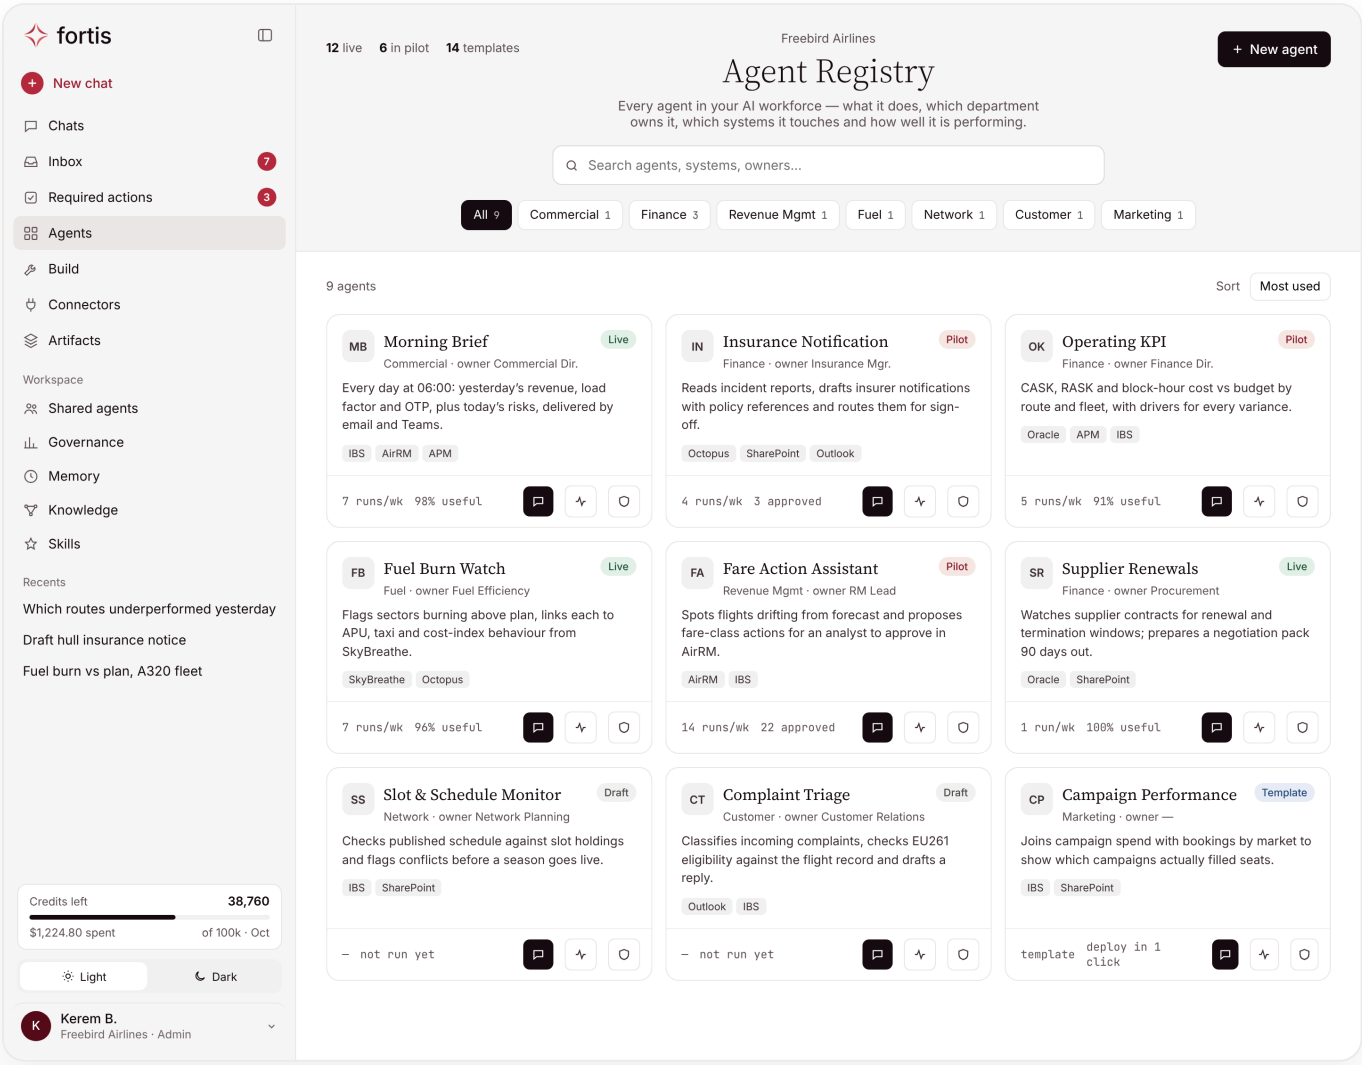

FEATURES

- Collapsed trace with link to the audit record
- Data table with copy, CSV download and expand
- Numbered citations back to each source record
- Suggested actions (write actions flagged as needing approval)
- Save the conversation as a reusable agent

Agent Registry

The AI workforce in one place: what each agent does, who owns it and how it is doing.

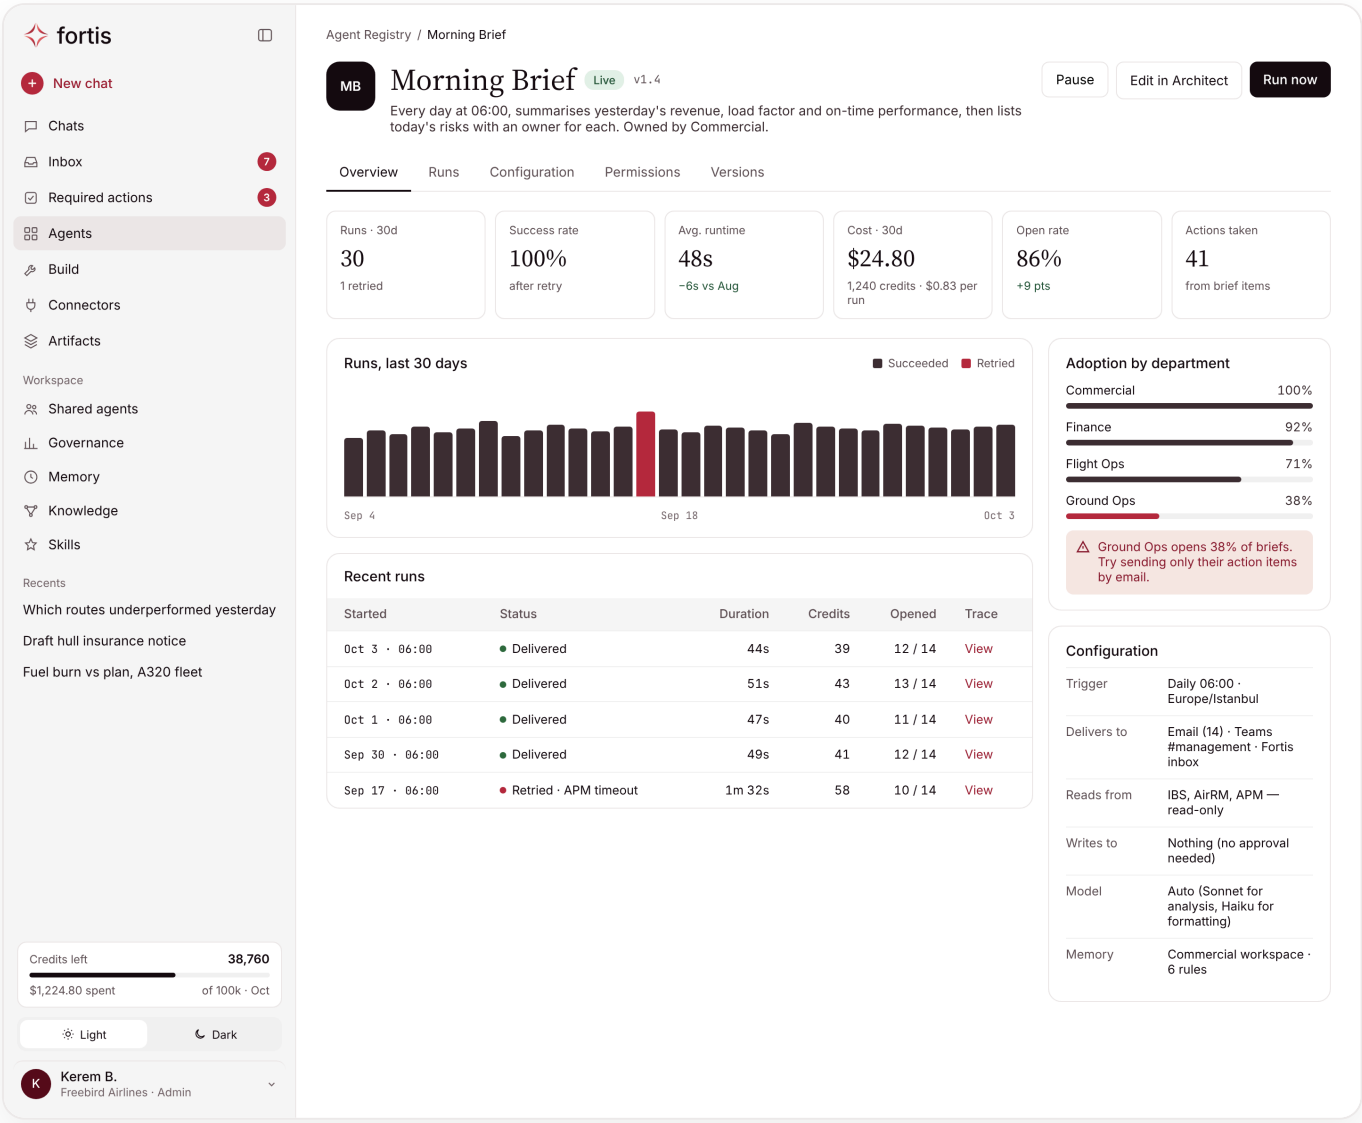

FEATURES

- Counts of live, pilot and template agents
- Search and department filters
- Cards with status, owner, connected systems, runs per week and usefulness
- Quick chat, monitoring and permissions per agent

Agent detail — monitoring

Utilisation and effectiveness for one agent, so owners can prove value and fix drop-off.

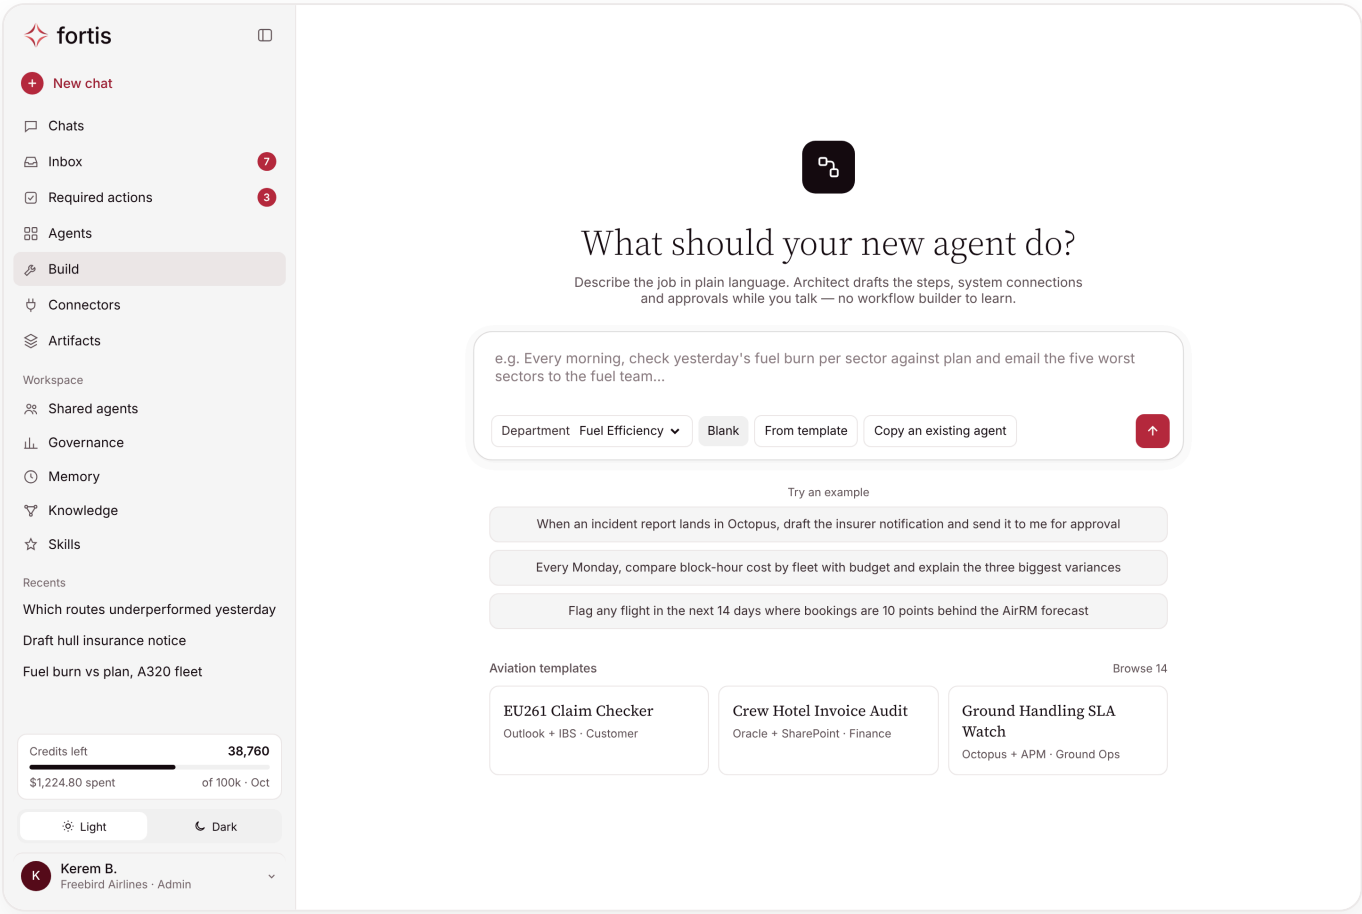

FEATURES

- Run, success, runtime, credit, open-rate and action KPIs
- 30-day run chart with retries highlighted
- Recent runs with duration, credits, opens and trace links
- Adoption by department, with a nudge when a team disengages
- Configuration: trigger, delivery, read/write scope, model, memory

Build Agents — Architect

Describe the job in plain language; no workflow builder to learn.

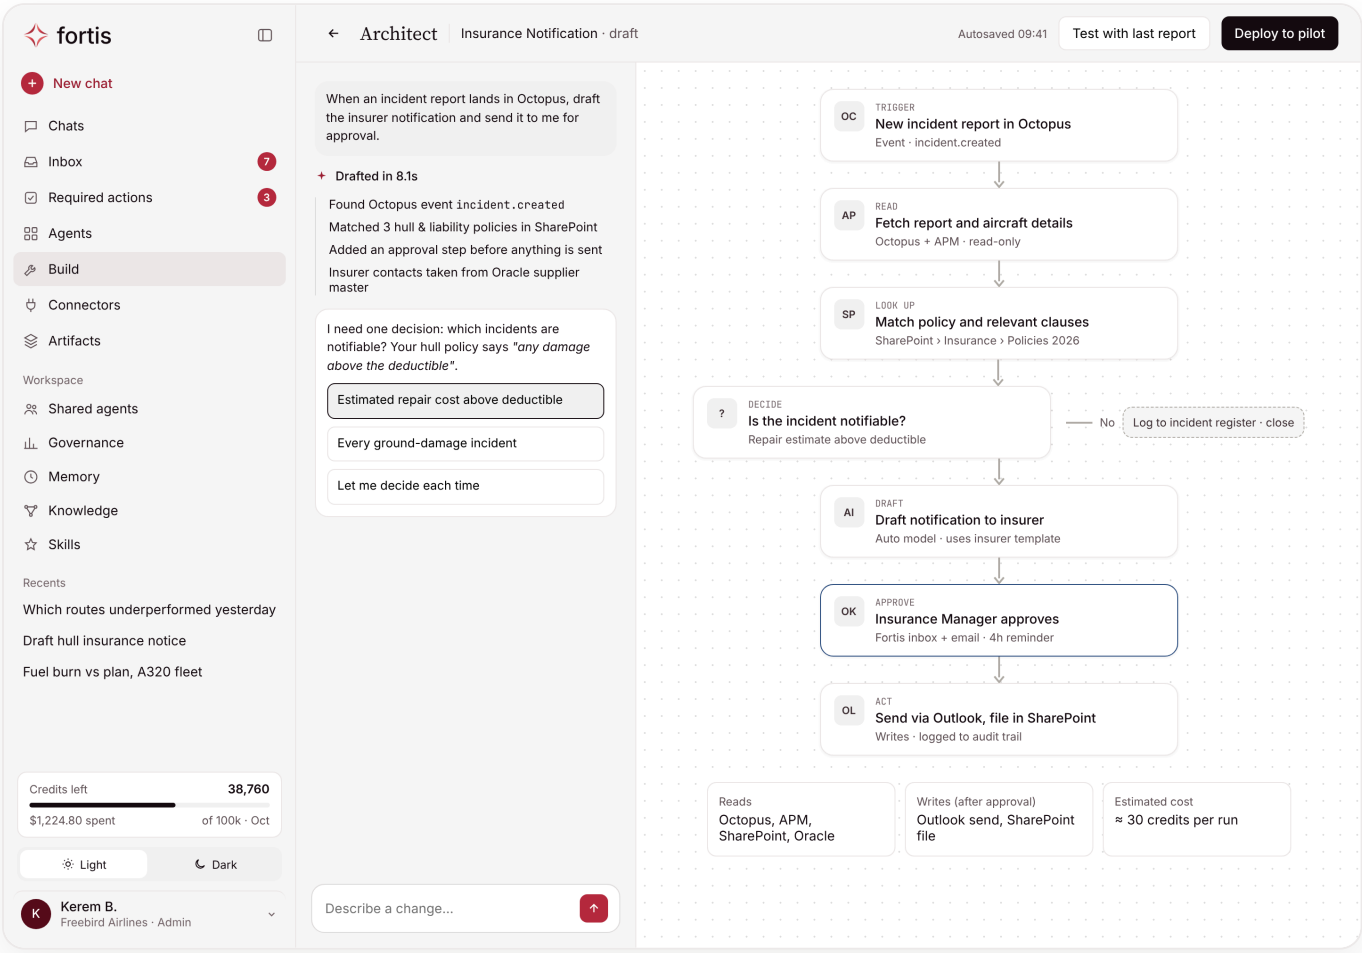

FEATURES

- Plain-language prompt with department selector
- Start blank, from a template or by copying an agent
- Airline-specific example prompts
- Aviation template shortcuts

Architect — drafting the orchestration

Architect turns the description into steps, asks for the decisions it needs, and shows cost and scope before deploy.

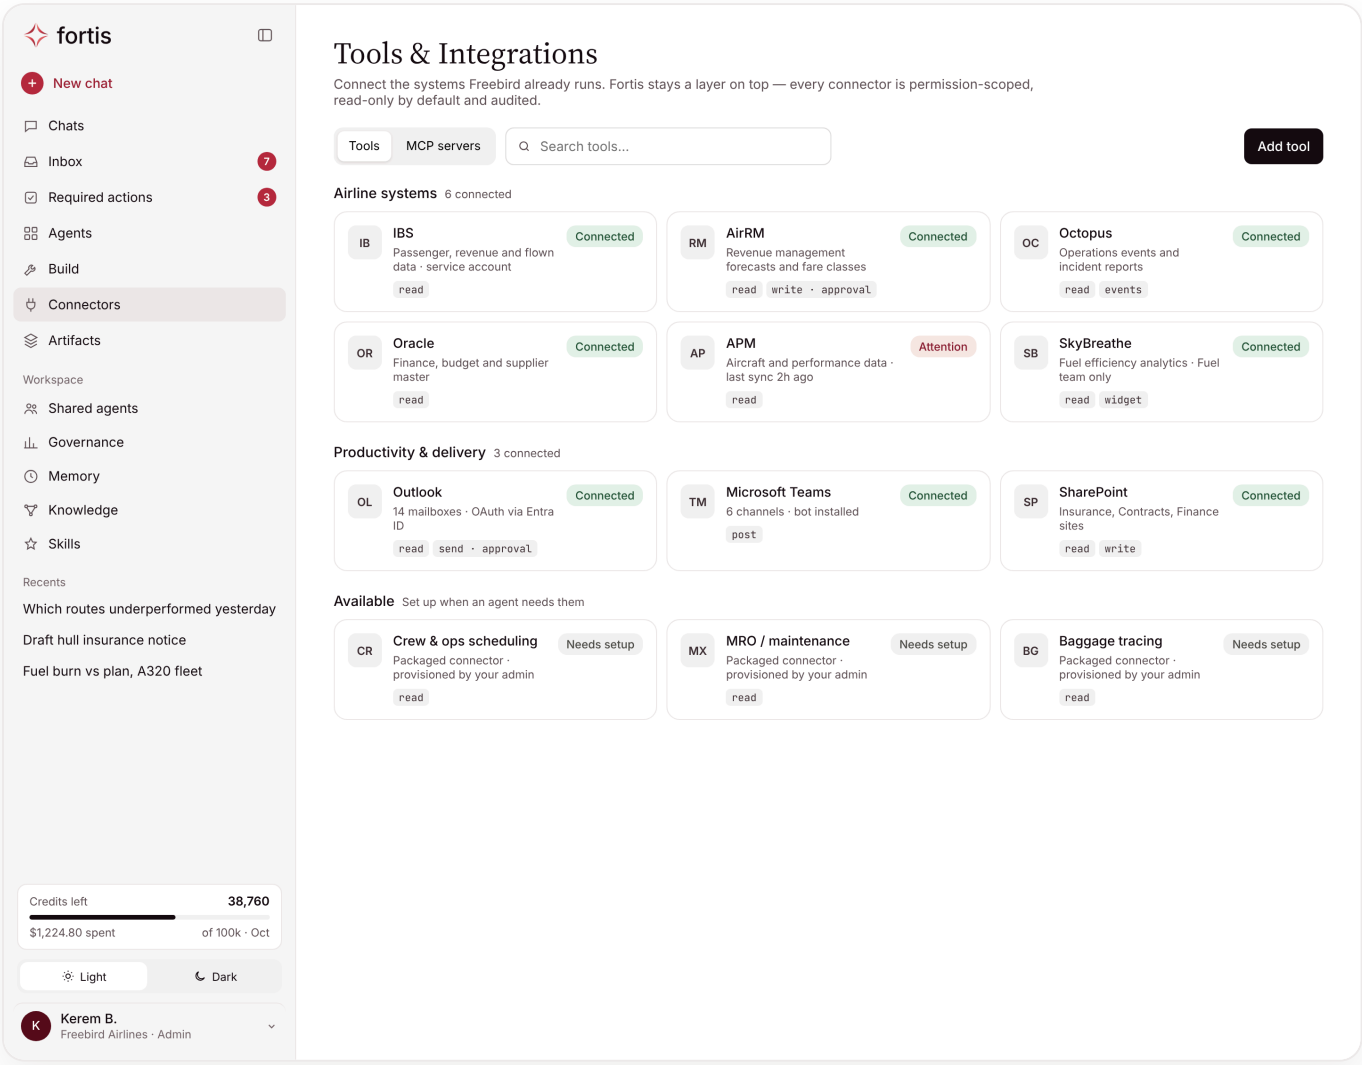

FEATURES

- Chat on the left, live flow on the right
- Steps typed as trigger, read, look up, decide, draft, approve, act
- Branching (non-notifiable incidents are logged and closed)
- Human approval step before any write
- Reads, writes and estimated credits per run
- Test with real data, then deploy to pilot

Tools & Integrations

Connect Freebird's existing systems; Fortis stays a layer on top.

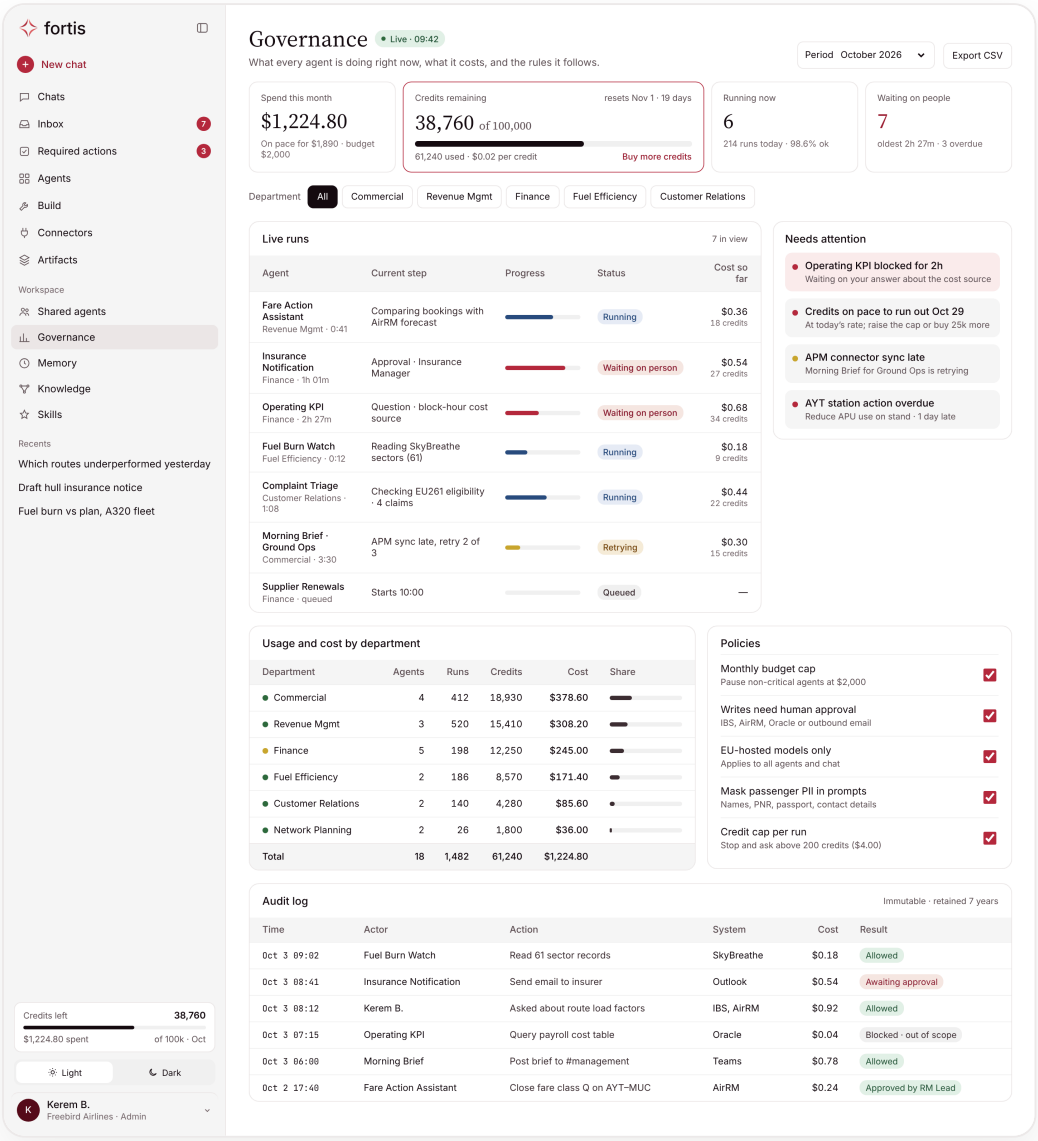

FEATURES

- Airline systems, productivity and available connectors
- Per-connector scopes (read, write with approval, events, widget)
- Health status (e.g. late sync)
- MCP servers tab for in-house systems

Governance — live runs, cost and credits

What every agent is doing right now, what it costs in dollars and credits, and the rules it follows.

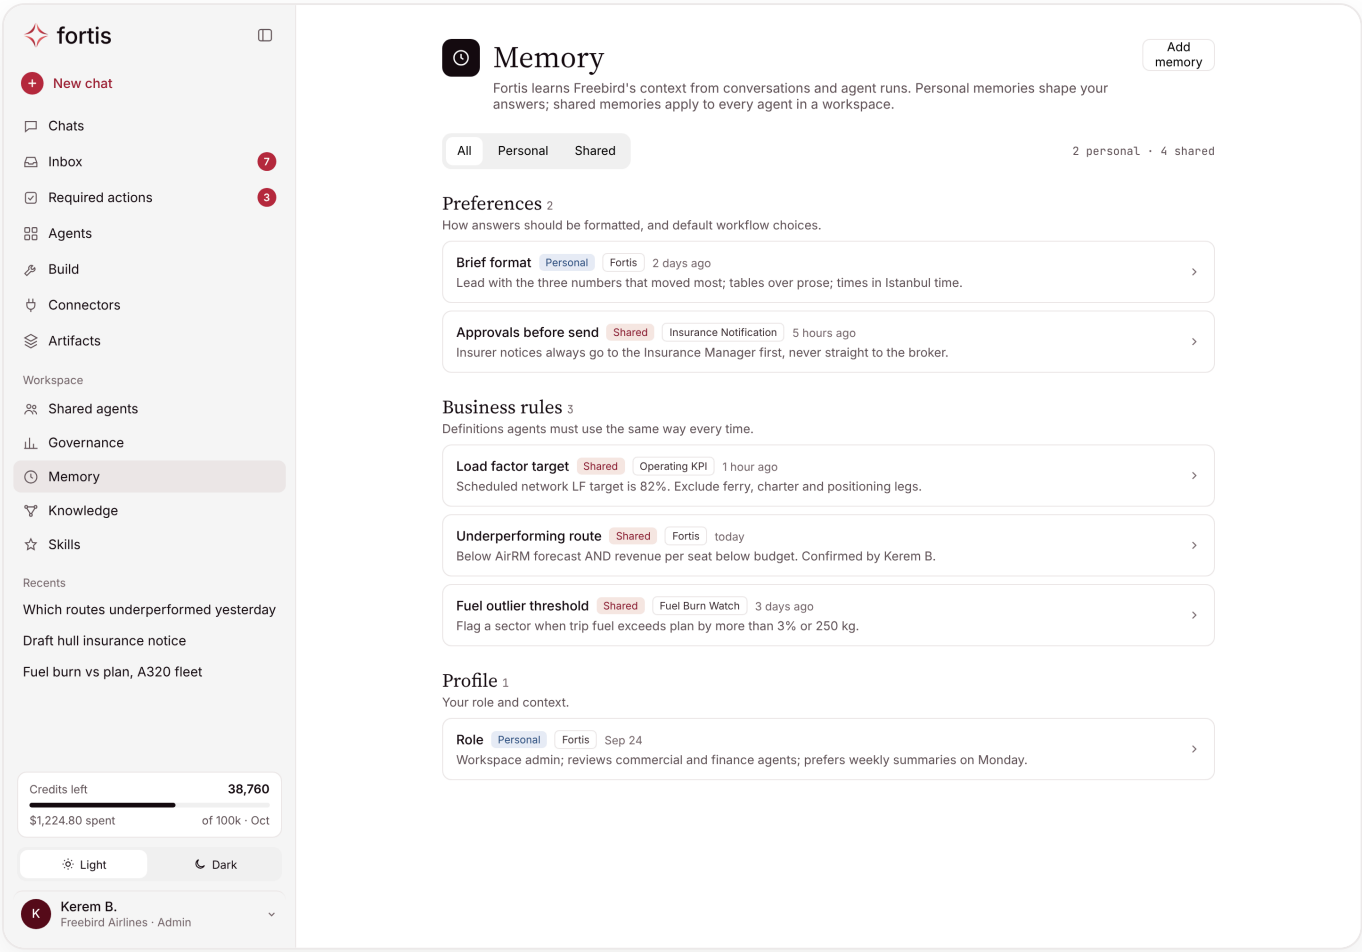

FEATURES

- Spend this month in dollars, pace against budget
- Credits remaining of the monthly allowance, with buy-more
- Live runs with current step, status and cost so far
- Needs attention: blocked agents, credit run-out forecast, late connectors
- Usage and dollar cost by department, policies and audit log with cost per action

Memory

What Fortis has learned about Freebird, and the definitions agents must use the same way.

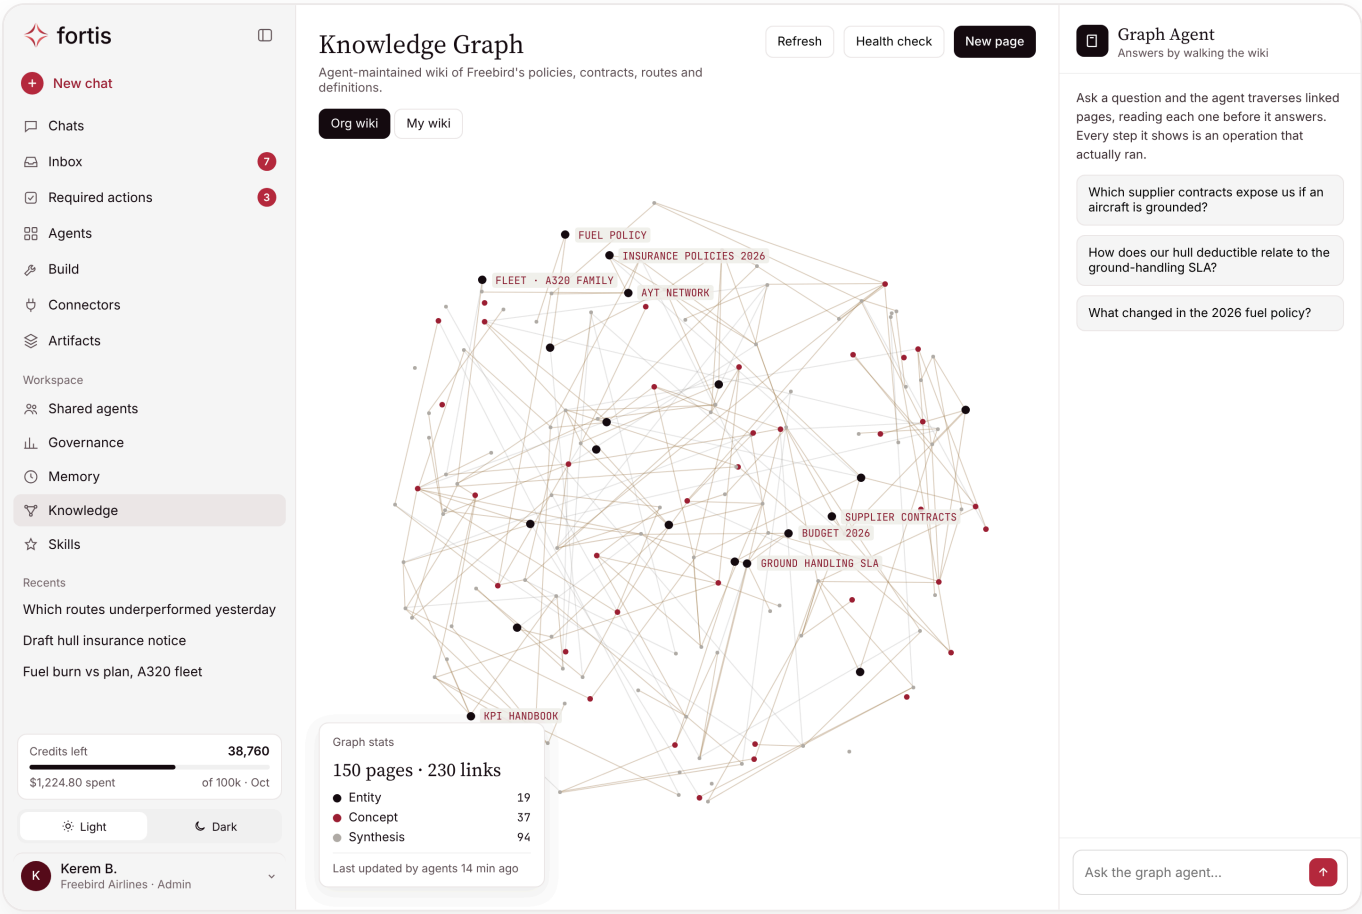

FEATURES

- All, personal and shared filters
- Preferences, business rules and profile groups
- Source (which agent or chat created it) and age
- Edit or remove any memory

Knowledge Graph

An agent-maintained wiki of policies, contracts, routes and definitions.

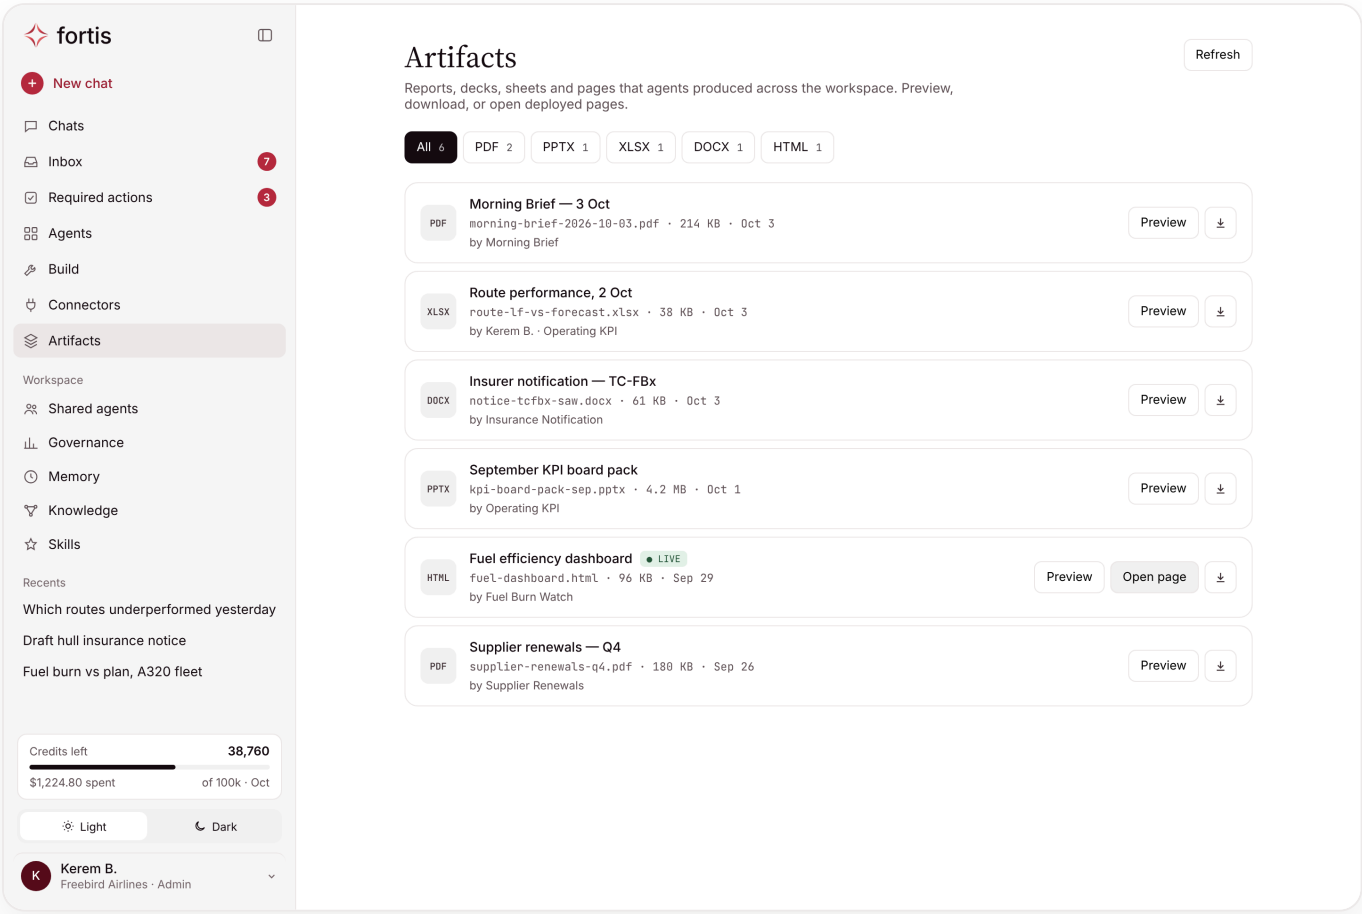

FEATURES

- Organisation wiki and personal wiki
- Graph of linked pages with hubs labelled
- Stats by page type
- Graph Agent that answers by walking linked pages

Artifacts

Everything agents produced: reports, decks, sheets and live pages.

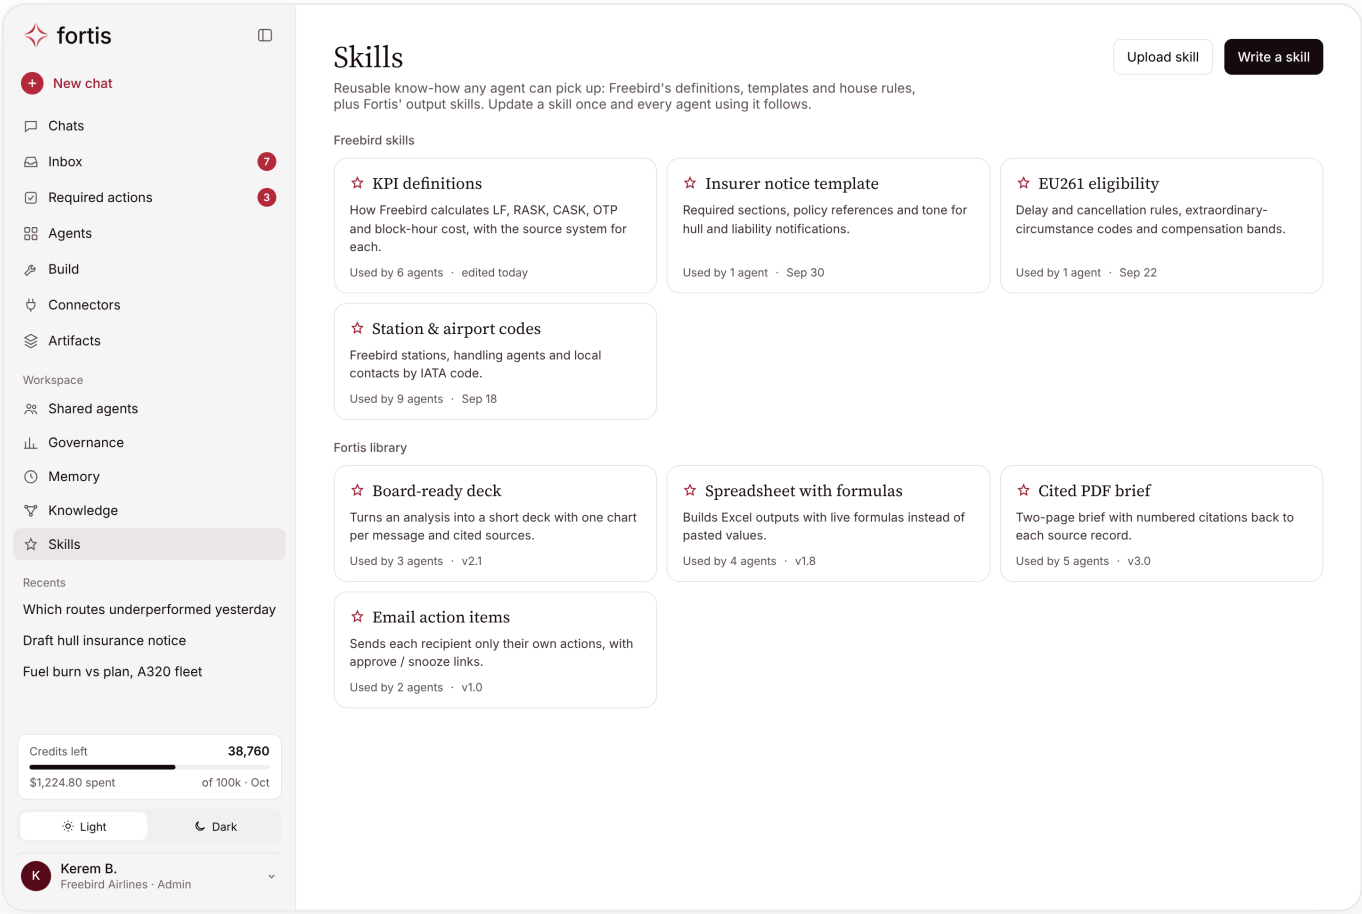

FEATURES

- Filter by file type
- Source agent, file name, size and date
- Preview, download, open live pages

Skills

Reusable know-how agents pick up, so definitions and templates live in one place.

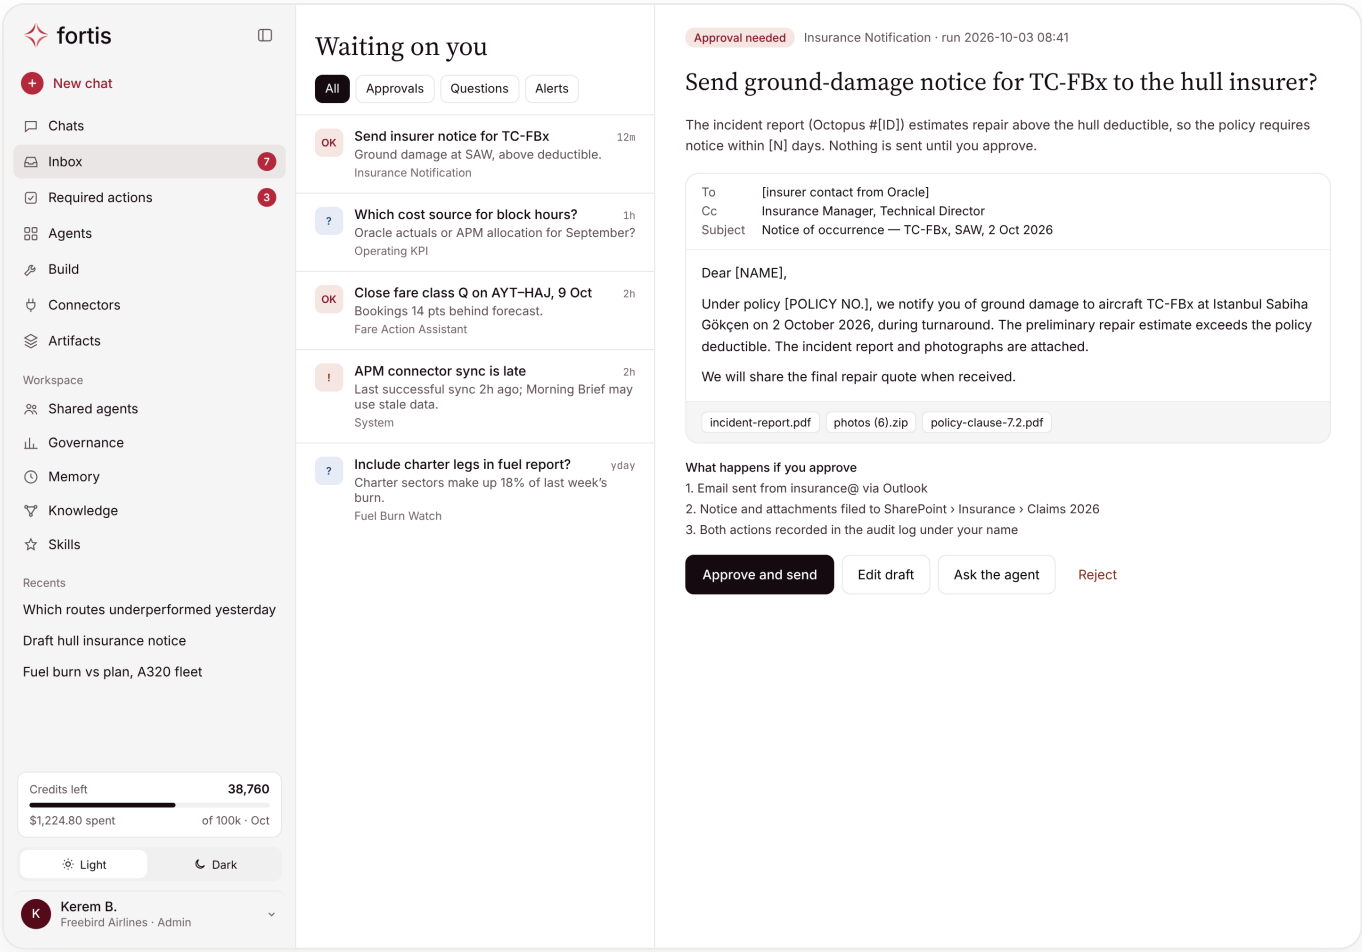

FEATURES

- Freebird skills: KPI definitions, insurer template, EU261 rules, station codes
- Fortis library: decks, spreadsheets, cited briefs, email action items
- Usage count per skill; update once, every agent follows

Inbox item — approval detail

One inbox for approvals, agent questions and alerts.

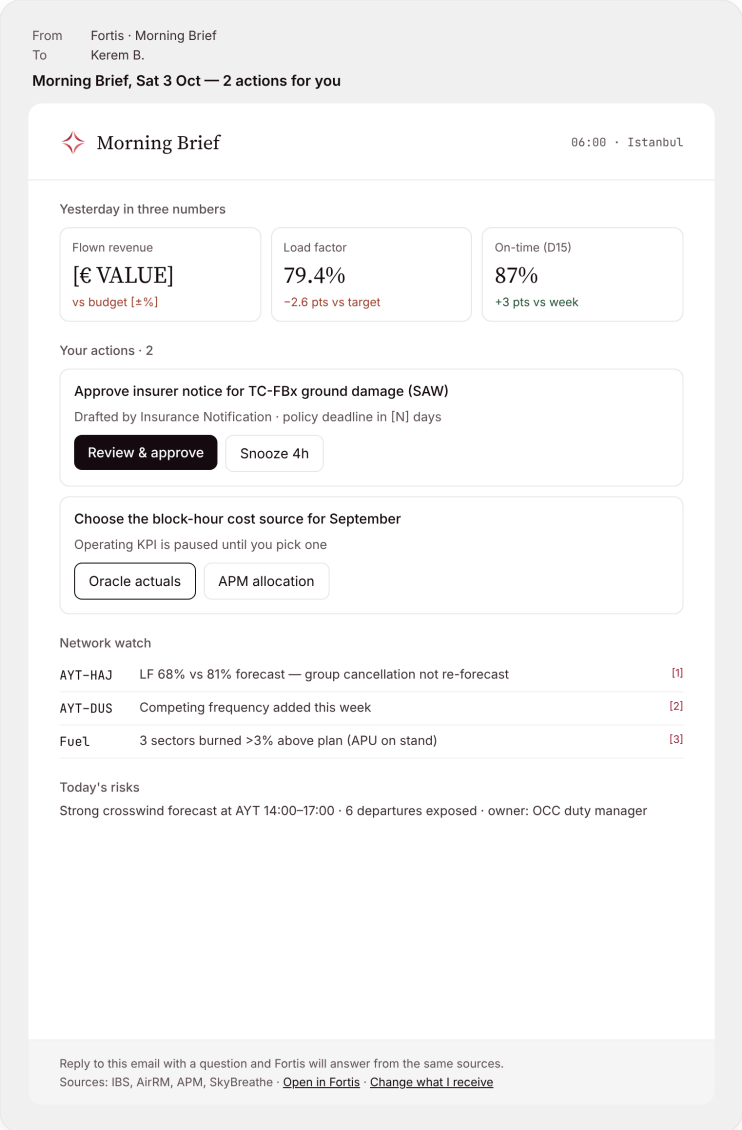

FEATURES

- Filters: approvals, questions, alerts
- Full preview of what will be sent
- “What happens if you approve” spelled out
- Approve, edit, ask the agent or reject

Morning Brief email

Reach people who rarely open Fortis: their actions arrive by email.

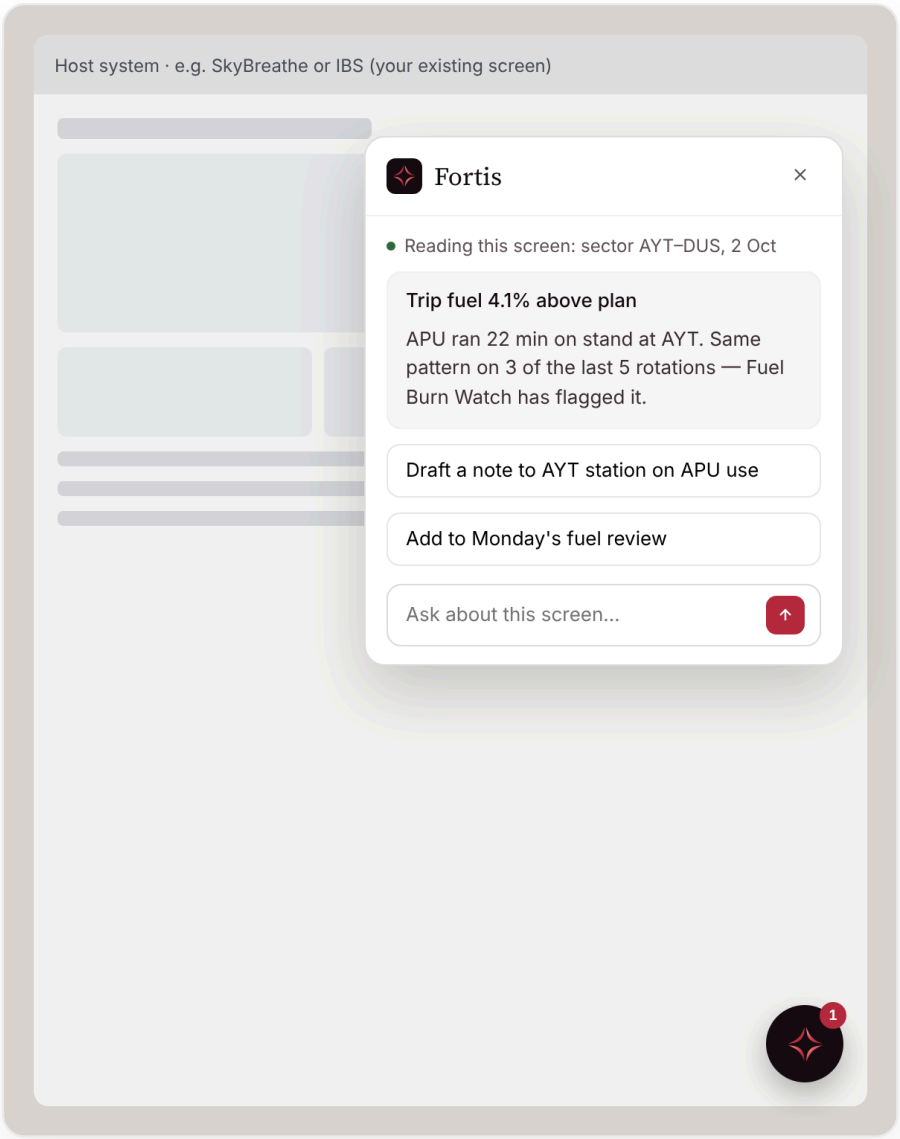

FEATURES

- Three headline numbers
- Personal action items with approve / choose buttons
- Network watch with citations
- Reply by email to ask a follow-up

In-app widget

Fortis inside the systems teams already use (e.g. SkyBreathe, IBS).

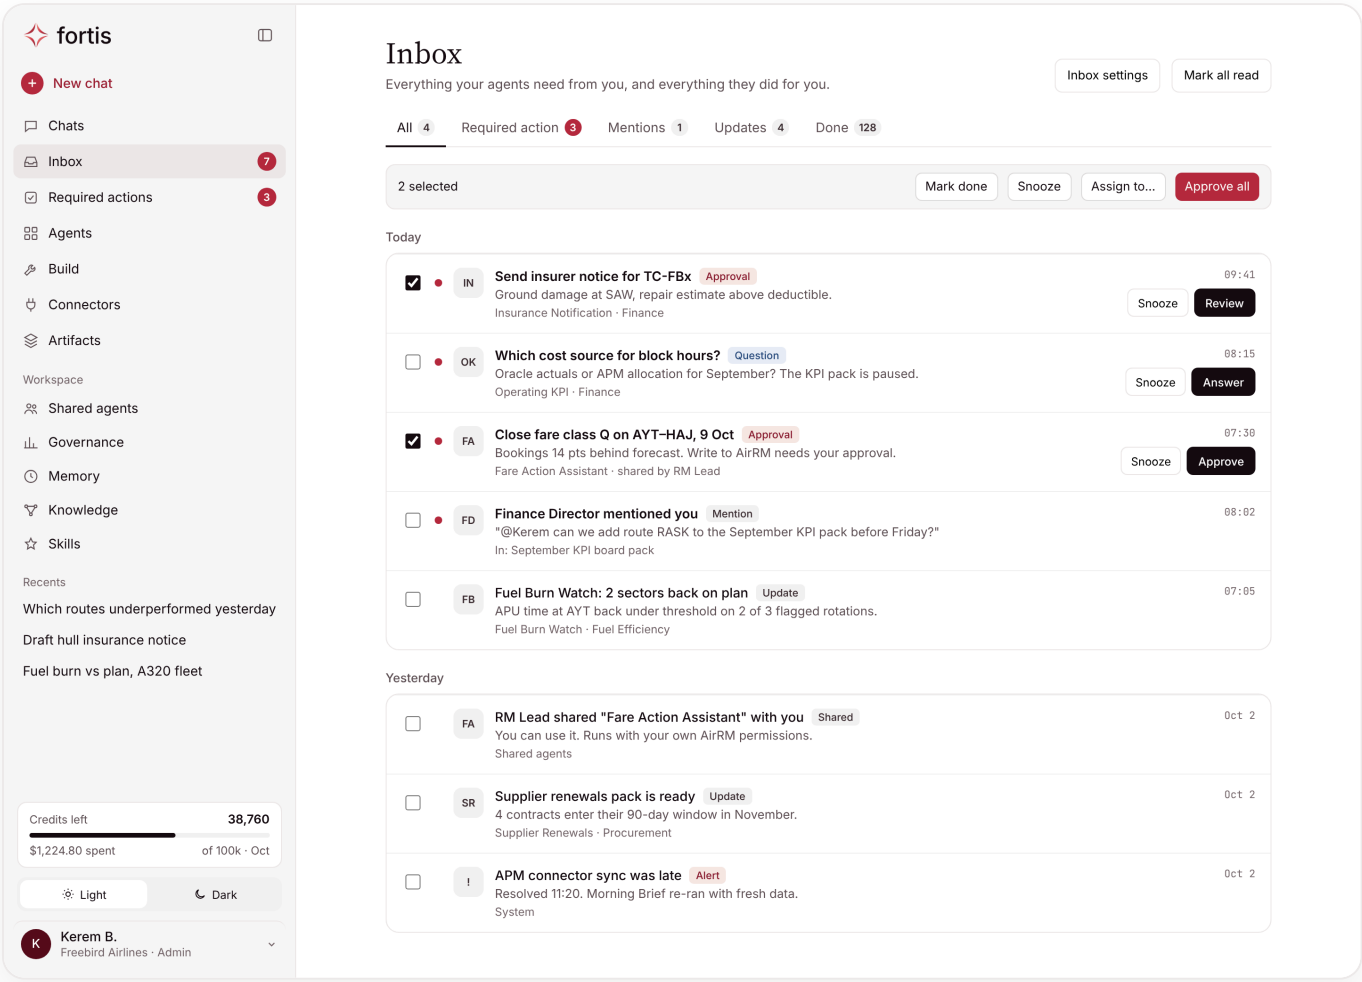

FEATURES

- Reads the current screen for context
- Surfaces relevant agent findings
- One-click follow-up actions
- Ask about this screen

Inbox

One triage list for everything agents need from you and everything they did for you.

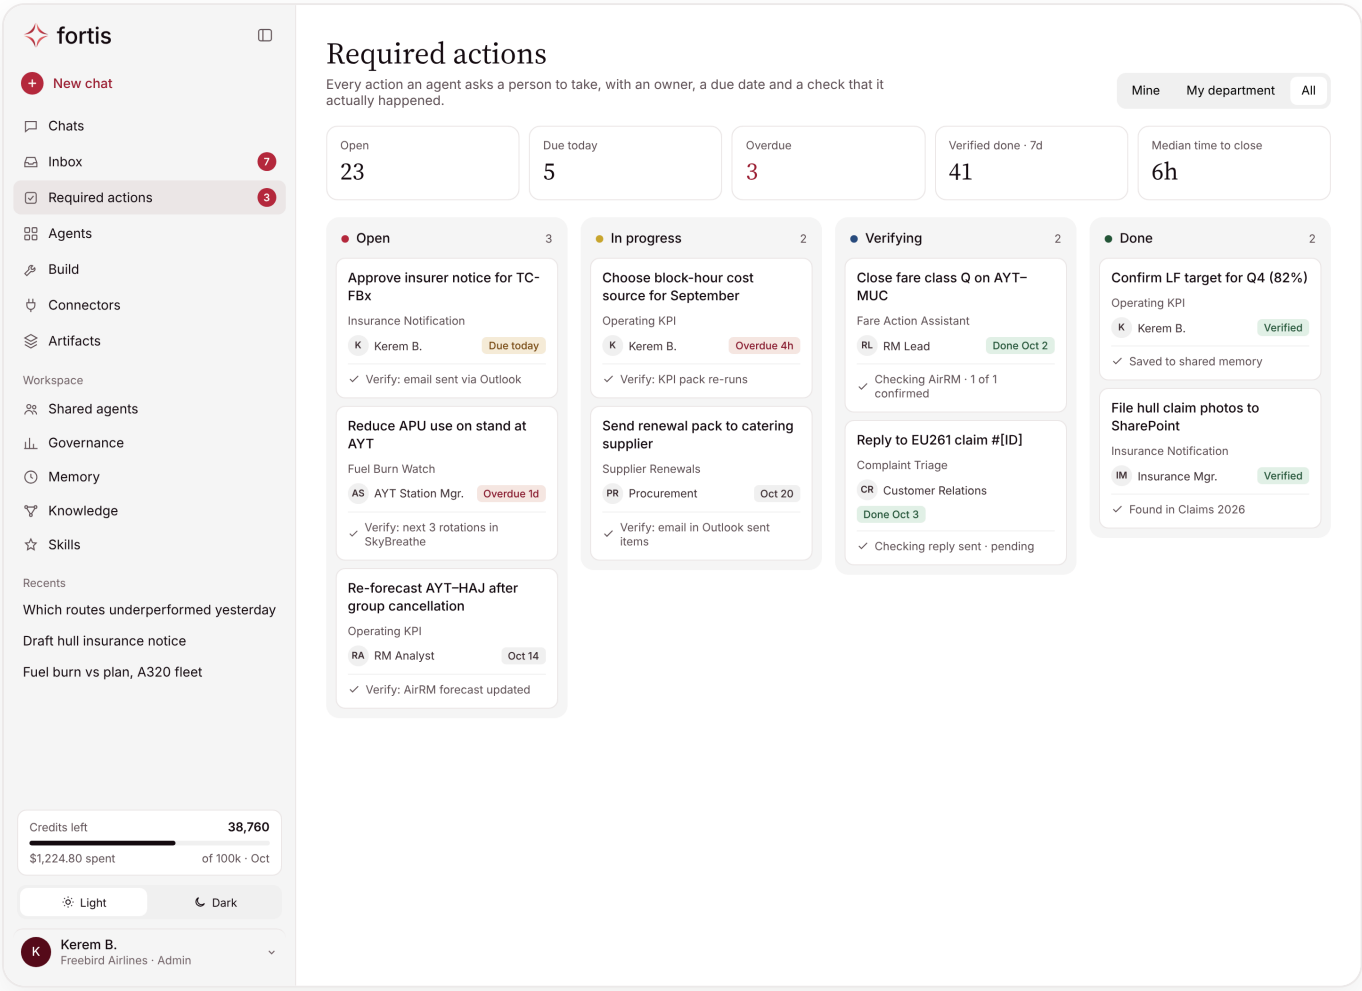

FEATURES

- Tabs: required action, mentions, updates, done
- Each item typed: approval, question, mention, shared, loop, alert
- Inline approve / answer / snooze without opening the item
- Bulk actions: mark done, snooze, assign, approve all

Required actions

Every action an agent asks a person to take, tracked until it is verified.

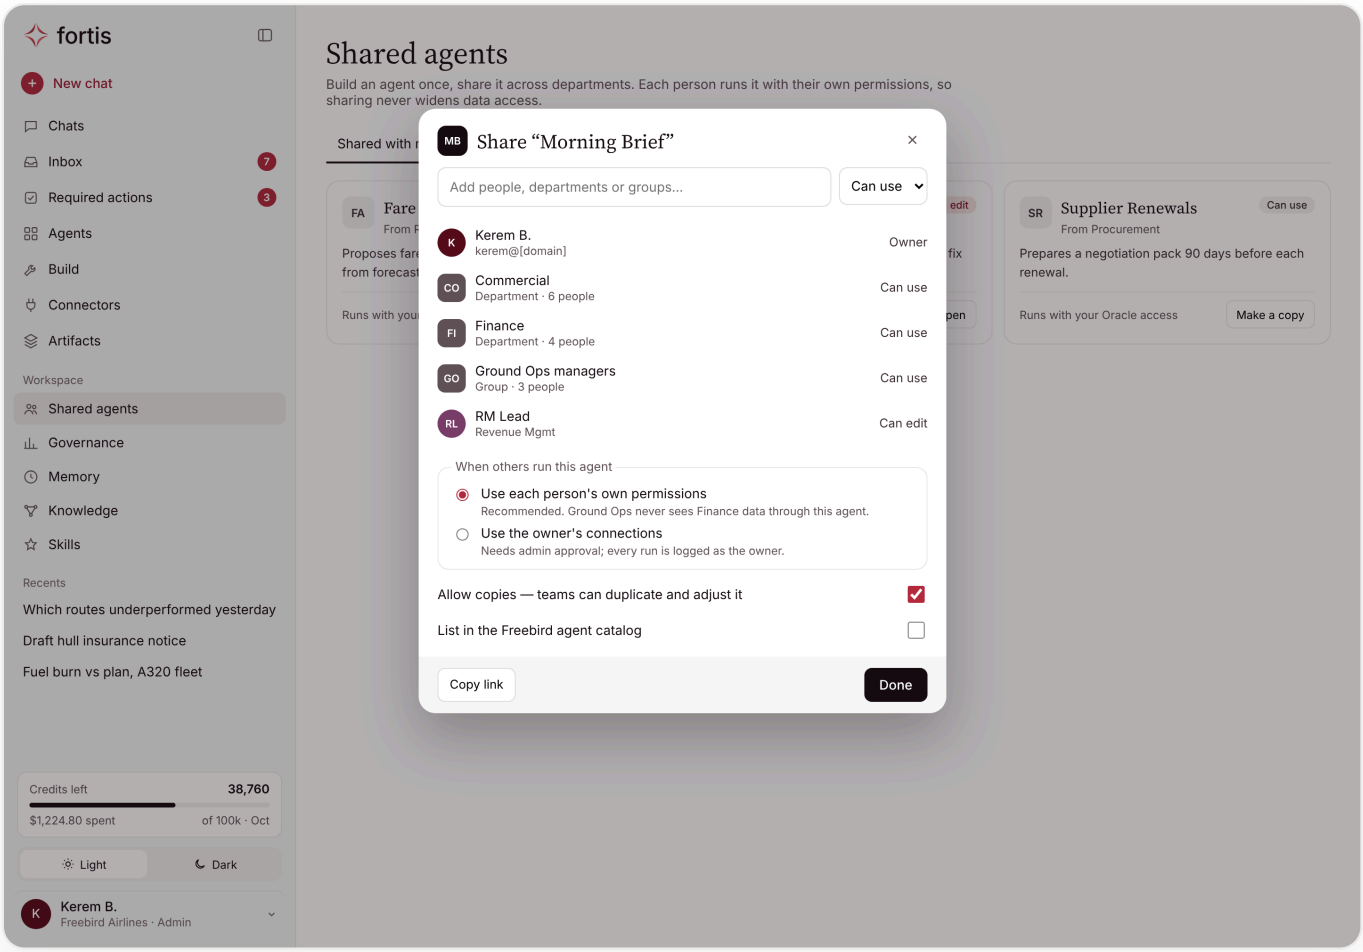

FEATURES

- Board: open, in progress, verifying, done
- Owner, due date and overdue status on every card
- Automatic verification against the source system
- Filters: mine, my department, all; KPIs incl. median time to close

Shared agents

Build once, share across departments without widening data access.

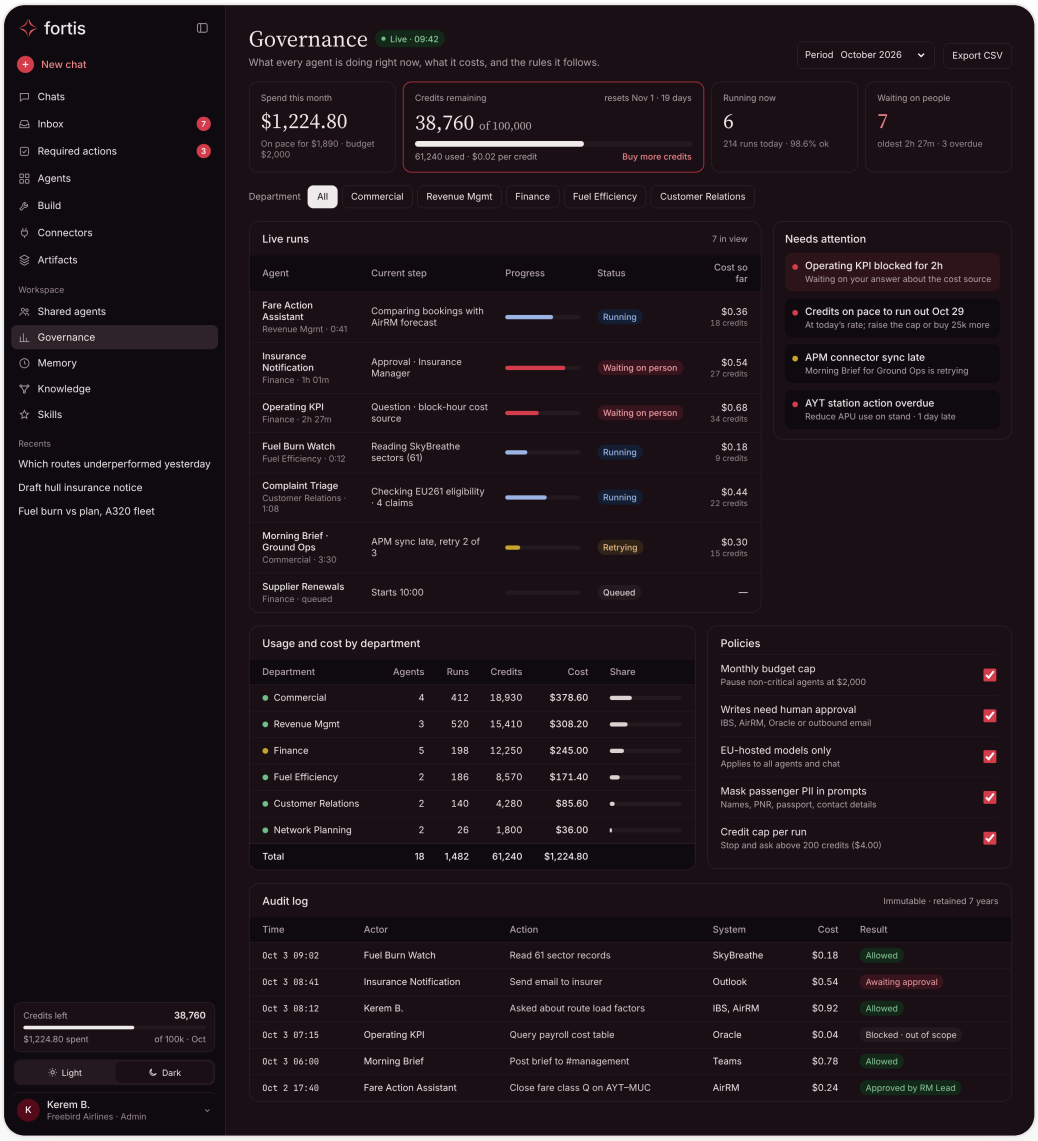

FEATURES

- Shared with me, shared by me and the Freebird catalog
- Share with people, departments or groups: can use / can edit
- Runs with each person's own permissions by default
- Allow copies and catalog listing

Dark mode

Every screen supports light and dark; switch from the sidebar.

FEATURES

- Light / Dark switch at the bottom of the sidebar
- Brand crimson brightened for contrast on dark
- Same layout and data, colours swap through theme tokens
- Per-screen dark tweak on the design canvas
